AT Commands

Modem operation is controlled by AT commands. These AT commands include the following:

- Basic AT commands, for example ATDT123
- Extended AT Commands for example AT&E, AT\A, AT%C, AT+MS
- S-Register commands, for example ATS32=8
- Fax Class 1 commands, for example AT+FTM
- Voice commands, for example AT#VTX

The command syntax and operation guidelines for each command category are described in the following sections.

A command line is a string of characters sent from a DTE (Terminal or Data Terminal Equipment) to the DCE while the DCE is in command state. Command lines have a prefix, a body and a terminator. The prefix consists of the ASCII characters **AT** or **at**. The body consists of printable ASCII characters. Space characters other than <CR> (See register S3), and <BS> (See register S5) are ignored. <CR> is command terminator.

Characters preceding the AT prefix are ignored.

AT Command Guidelines

- Basic AT commands consist of single ASCII characters, which may be preceded by a prefix character, for example **&**, and followed by a decimal number, for example **AT&W1**.
- Missing decimal parameters are interpreted as 0. For example, if you type **ATH**, the command **ATH0** is assumed.
- Fax commands are preceded with the **+F** characters and terminated by semicolon (;) or <CR> character.
- The modem supports editing command lines by recognizing the <BS> character.
- The AT command sequence may be followed by any number of commands in sequence, with the exception of commands Z, D or A, where all characters following on the same command line will be ignored.

4 Smart Link Modems AT Commands Set And S-Registers

- When a syntax error is found in the command line, an ERROR response will be returned to the DTE. Execution of commands D and A will be aborted if another character is entered before completion of the handshake.
- When the modem has entered on-line data mode, it is possible to break the data transmission in order to issue more AT commands. This is done by the DTE sending a sequence of three escape characters (defined in S2, '+' by default).

AT Command Set

The modem will comply with the commands listed below. Parameters applicable to each command are listed below. Default factory configuration settings are marked by an asterisk *.
Features marked with (-) are not yet available in current version.

Basic AT Commands

A/ Re-execute Command
The modem repeats the last command line sent by the DTE. Usually used for re-dialing.
Note: This command should **not** be terminated by <CR>.

A Answer
The modem will go off-hook and attempt to answer an incoming call. Upon successful completion of handshake, the modem will go on-line in answer mode.

Notes:

If +FCLASS=0 is selected, the modem will enter the connect state after exchanging carrier with the remote system. If no carrier is detected within the period specified in S7, the modem hangs up. Any character entered while connecting will abort the connection process.

If +FCLASS=1, the modem will go off-hook in V21 answer mode. It will generate the V21 2100 Hz answer tone for 3 +/- 0.5 seconds, and following a delay of 70 ms, will proceed as if the +FTH=3 command were issued. At any stage up to (but excluding) the +FTH=3 command state, any character will abort the communication.

If +FCLASS=8 (#CLS=8), the modem will go off-hook and a voice session will take place.

Related S-Reg: S0

5 Smart Link Modems AT Commands Set And S-Registers

Bn CCITT Control
B0 Connect at V.22 1200 bps

Result codes:
OK n=0
Error Otherwise

Dn Dial
Directs the modem to go on-line, dial according to the string entered, and attempt to establish a connection. The Dial String may consist of any of the characters described below:

* T Tone dialing (first character in the string)
P Pulse dialing (first character in the string)
L Redial last dialed number (first character in the string)
0-9 Digits 0 to 9.
* Asterisk (tone only)
Hash (tone only)
W Wait for dial tone; the modem will wait for dial tone before dialing the digits following "W". S6 register will be used for timeout. (X3 or higher)
, (Comma); Pause for the time specified by S8 before resuming the dialing
; (Semicolon) Return to command mode after dialing. This allows the user to issue additional AT commands while remaining off-hook. Actual call progress will be entered only after a dial command issued without the ";" terminator.
S=n Dial the number stored in the directory; n=0-3 (see &Z).
! Flash; The modem will go on hook for a time defined by S24.
@ Wait for silence; The modem will wait for at least 5 seconds of silence before resuming the dialing. If no such silence is detected before the expiration of the call abort timer (S7), the modem will terminate with NO ANSWER response (or BUSY if applicable). If answer tone arrives during execution of this parameter, the modem handshakes. (X3 or higher)
(, < > (space) String format characters - ignored
<i> any other character - ignored.

Notes:

6 Smart Link Modems AT Commands Set And S-Registers

If +FCLASS=0 is selected, the modem will attempt to connect with another data modem. The modem will use the time period specified in S6 and S7 as time-outs in the handshake process. If a timeout expires, the modem will go on-hook and respond with NO CARRIER response.

The command will be aborted in progress is a DTE character is entered before completion of the handshake.

If +FCLASS=1, the modem will attempt to connect with a fax machine (or modem) by entering the HDLC V21 channel 2 receive state (as if +FRH=3 had been issued).

The command will be aborted upon receipt of a DTE character if the modem has not finished dialing. In this case the modem will go on-hook and return to command mode responding with NO CARRIER message. If the modem has finished dialing, It proceeds as if +FRH=3 command has been issued.

If +FCLASS=8 (#CLS=8), the modem will go off-hook in V21 answer mode. It will decide (based on timers) when the other side answers in voice and a voice session will take place.

Related S-Reg: S5,S6,S7,S16,S22,S28,S56

En Set local echo

The modem enables/disables echo of characters to DTE. Parameter value is written to S13.

E0 Disable command echo.

* E1 Enable command echo.

Result codes:

OK n=0 or 1

Error Otherwise

Related S-Reg: S13

Hn Set ON/OFF hook

H0 Modem hangs up (goes on-hook).

* H1 Modem goes off hook.

Result codes:

OK n=0 or 1

Error Otherwise

8 Smart Link Modems AT Commands Set And S-Registers

Related S-Reg: S30

Mn Speaker control
Select when the speaker is On/Off.

M0 Speaker always OFF

* M1 Speaker ON from start of dialing until receiving carrier

M2 Speaker always ON

M3 Speaker OFF from end of dialing until receiving carrier

Result codes:
OK n=0-3
Error Otherwise

Related S-Reg: S29

Nn Automode control
Enable/Disable Automode detection.

N0 Automode detection disabled. A subsequent handshake will be conducted according to the contents of S32.

* N1 Automode enabled. A subsequent handshake will be conducted according to the Automode algorithm.

Result codes:
OK n=0 or 1
Error Otherwise

Related S-Reg: S31

On Returns to on-line data mode
This command is normally used to connect the DTE back after an escape (+++) has been issued.

O0 Return to on-line data mode.

O1 Return to on-line data mode, retrain first.

Result codes:
OK n=0-1
Error Otherwise

P Pulse dialing
Forces pulse dialing. Applies to subsequent dialing commands.
This command holds until the next T dial modifier or T command is received.

9 Smart Link Modems AT Commands Set And S-Registers

The modem will go off hook and attempt to answer an incoming call. Upon successful completion of handshake, the modem will go on-line in answer mode.

Related S-Reg: S16

Q Quiet result codes control

* Q0 Enable sending result codes to DTE.

Q1 Disable sending result codes to DTE.

Result codes:

OK n=0 or 1

Error Otherwise

Related S-Reg: S14

S Read/Write S-Register

This command has a few derivatives:

Sn=v Sets the value v (decimal) to S-register n (v=0-255)

Sn? Displays the value of S-register in decimal format (3 digits)

Note: Some registers are read-only

Result codes:

OK All parameters valid

Error Invalid S register or value. Trying to write to a read-only register

T Tone dialing

Forces tone dialing. Applies to subsequent dialing commands.

This command holds until the next T dial modifier or T command is received.

This command changes S14 to reflect the current dialing mode.

Related S-Reg: S16

Vn Verbose/Numeric result codes

Select the time of result messages sent to the DTE.

For a list of result codes and verbal messages see X command.

* V0 Short form (numeric) result codes to be sent to DTE.

V1 Long form (verbose) result codes to be sent to DTE.

Result codes:

OK n=0 or 1

10 Smart Link Modems AT Commands Set And S-Registers

Error otherwise

Related S-Reg: S15

Xn Extended result codes

Select the subset of result codes to be used by the modem to the DTE.

If the modem is in fax mode (+FCLASS=1), the only message sent to indicate connection is "CONNECT" without a speed indication.

X0 Supported messages: OK, CONNECT, RING, NO CARRIER and ERROR, Blind call enabled.

X1 Supported messages: OK, CONNECT xxxx, RING, NO CARRIER and ERROR, Blind call enabled.

X2 Same as X1 + NO DIAL TONE message, Blind call disabled

X3 Same as X1 + BUSY message, Blind call enabled.

* X4 All messages supported, Blind call disabled (see list below).

Notes:

W,@ dial modifiers are ignored in X1, X2

S6 (Wait before dial) is ignored in X2, X4 if no W is specified in dial string

S6 is set to 0 means a blind call

AT+GM Commands - Model And Manufacturer Identification

Note: Commands in this section are supported starting from drivers version 2.90 and up.

+GMI Request Manufacturer Identification (similar to AT13)
for example:

ModemWorks Ltd.

+GMM Request Model Identification (similar to AT12)
for example:

**ModemX
Ver 2.90.00**

+GMR Request Revision Identification
for example:

**SW Vendor
Ver 2.90.00
MV (CID)**

AT+GCI Command – Country Of Installation

Note: Commands in this section are supported starting from drivers version 2.90 and up.

Indicate or select the country of installation. The modem uses this setting to determine country-specific functions.

Note: There are now two alternative ways to set the country for the modem: either through AT+GCI command or using the “Modem Settings” utility in the “Control Panel” of the OS.

+GCI=<T.35 country code>	Sets current country. Valid country codes are hexadecimal numbers based on ITU-T.35. See below for a list of valid codes. Example - setting the current country to USA: AT+GCI=B5
+GCI?	Reports the hexadecimal numeric value corresponding to the current country setting. For example, when modem is set to France the response will be: +GCI:3D
+GCI=?	Reports the list of numerical values corresponding to the country or countries that are supported by the modem. Example: +GCI:(20,73,B5) indicates the modem can be set for Canada, Mexico or the USA.

AT& Commands

- &An** Connect message format
Select the format of the CONNECT message.
- * **&A0** no extra messages besides CONNECT xxxxx
- &A1** Add Modulation indicator:
V.21/ V.22/ V.22BIS/ V.32/ V.32BIS/ V.34/
V.34BIS/ B103/ B212
For example:
Modulation: V.34
- &A2** Add Error Detection Protocol and Data
Compression indicators.
For example:
Protocol: LAPM/MNP/NONE
Compression: CLASS 5/V.42BIS/NONE
- &A3** Add Modulation Indicator + Error Detection
Protocol + Data Compression indicators (see
above).
- &A7** Add transmit rate indicator (TXRATE).
For example:
TXRATE 26400
Related S-Reg: S70, S71
- &Cn** Control Carrier Detect (CD,RLSD) behavior
Controls the RLSD output behavior.
- * **&C0** RLSD is assumed to be ON all the time
- &C1** RLSD follows the carrier state
Result codes:
OK n=0 or 1
Error Otherwise
Related S-Reg: S60
- &Dn** Controls DTR behavior (NA)
Controls the DTR output behavior.
Note: This command is supported for compatibility.
It has no significance in Smart Link's modems
environment.
- * **&D0** DTR is taken to be ON all the time
- &D1** DTR drop causes entry to command mode without
disconnect
- &D2** DTR follows DTR circuit definition
- &D3** DTR drop causes software reset (as in Z0)
Result codes:

23 Smart Link Modems AT Commands Set And S-Registers

OK n=0-3
Error Otherwise
Related S-Reg: S63
&En Connect message speed source
Select the requested source for the speed field in the
CONNECT message.
* &E0 DCE Speed
&E1 DTE Speed

Note: Since a virtual port is involved, the DTE is not bound by any UART limitation, and may be theoretically set as high as 921600.

DTE speed is supported for compatibility only. It bears little significance in Smart Link's modem environment.

Related S-Reg: S71

&Fn Sets factory configuration
Select one of the factory settings.
&F0 Select factory setting 0
&F1 Select factory setting 1
Result codes:
OK n=0-1
Error Otherwise
Related S-Reg: S59

&Hn Sets flow control
Select the user defined configuration.
&H0 Flow control disabled (NA)
* &H1 "HW" flow control RTS/CTS (emulation)
Result codes:
OK n=0-1
Error Otherwise

&Kn Same as %Cn

&Pn Set pulse dial make/break ratio
* &P0 US & Canada 39%/61% (10 pps)
&P1 UK & Hong Kong 33%/67% (10 pps)
&P2 Same as 0, except at 20 pps
&P3 Same as 1, except at 20 pps
Result codes:
OK n=0-3

24 Smart Link Modems AT Commands Set And S-Registers

Error Otherwise
Related S-Reg: S28

&Rn Controls RTS behavior
Controls the RTS output behavior.

Note: This command is supported for compatibility.
It has no actual effect

&R0 RTS ignored
&R1 Modem receives data only on RTS (NA)
Result codes:
OK n=0 or 1
Error Otherwise
Related S-Reg: S61

&Sn Controls DSR behavior

Note: This command is supported for compatibility.
It has no actual effect.

&S0 DSR override (is assumed to be ON all the time)
&S1 DSR follows circuit definition
Result codes:
OK n=0 or 1
Error Otherwise
Related S-Reg: S64

&V Display Active profile, Stored Profiles, Stored Phone
Numbers (Equivalent to I4-I7 combined)

&Wn Writes current configuration
&W0 Write to template 0
&W1 Write to template 1
Result codes:
OK n=0-1
Error Otherwise
Written to registry.

25 Smart Link Modems AT Commands Set And S-Registers

&Zn Stores dial string
Stores/Displays dial string (up to 47 characters)
&Zn=s Store dial string (n=0-4)
&Zn=L Store the last dialed string (n=0-4)
&Zn? Display the nth string
&ZL? Display the last dialed string
Written to registry.

AT\ Commands - Error correction control

- \An** Maximum MNP block Size
 \A0 64 characters maximum block size
* \A1 128 characters maximum block size
 \A2 192 characters maximum block size
 \A3 256 characters maximum block size
Result codes:
OK n=0-3
Error Otherwise
Related S-Reg: S<basereg+1> of V.42 registers
- \Bn** Transmit break to remote (-)
In non-error correction mode, the modem will transmit a break signal to the remote modem with a length of n*100ms. If a number above 9 is entered, 9 is used.
Result codes:
OK if connected in data modem mode
Error if not connected or if connected in fax modem mode
- \Kn** Break Control (-)
Controls the response of the modem to a break received from DTE or a remote modem or the \Bn command.
The behavior parameter is written to Sxx
 \K0 Enter on-line command mode, no break sent to remote modem
 \K1 Clear data buffers and send break to remote modem
 \K2 Same as 0
 \K3 Send break to remote modem immediately
 \K4 Same as 0
* \K5 Send a break to remote modem in sequence with transmitted data
Related S-Reg: S<basereg+x> of V.42 registers
Result codes:
OK n=0-5
Error Otherwise

27 Smart Link Modems AT Commands Set And S-Registers

\Nn Error correction operating mode

- \N0 Normal (Speed buffering) - No error correction
- \N1 Direct (pass-through) 128 characters maximum block size
- \N2 Reliable (error correction) mode. The Modem will attempt LAPM and then MNP
- * \N3 Auto reliable mode. Same as \N2, but will fall back to Normal
- \N4 LAPM error correction mode only, hang up upon failure.
- \N5 MNP error correction mode only, hang up upon failure.

Result codes:
OK n=0-5
Error Otherwise

Related S-Reg: S<basereg> of V.42 registers

AT% Commands

- %Cn** Compression control
%C0 Disable data compression
%C1 Enable MNP5 data compression
%C2 Enable V.42bis data compression
* %C3 Enable MNP5/V.42bis data compression
Result codes:
OK n=0-3
Error Otherwise
Related S-Reg: S<basereg+2> of V.42 registers
- %En** Line quality monitor control
Controls whether or not the modem will automatically monitor the line quality and request a retrain (%E1), or fall back when quality is insufficient or fall forward when line quality improves (%E2).
- * %E0 Disable line quality control
%E1 Enable line quality control and auto retrain
%E2 Enable line quality control and fallback/forward
- Result codes:
OK n=0-3
Error Otherwise
Related S-Reg: S39

AT+MS Command

+MS Modulation select

This command selects the modulation, optionally enables/disables Automode, and optionally specifies the lowest and highest connection rates.

The command format is:

AT+MS=

[<mod>][,<automode>][,<min_rate>][,<max_rate>]]
]

<mod> a decimal number specifying the preferred modulation (automode enabled), or the modulation (automode disabled).

<automode> 0/1 Automode disabled/enabled

<min_rate> minimum rate for connection. If lower than the actual minimum rate for the selected modulation, the actual lowest supported rate will be taken.

<max_rate> maximum rate for connection. If higher than the actual maximum rate for the selected modulation, the actual highest supported rate will be taken.

Table 2 - +MS command parameters

<mod>		Modulation possible rates
22	V.22	1200
122	V.22bis	2400,1200
23	V.23	1200
32	V.32	9600, 4800
132	V.32bis	14400, 12000, 9600, 7200, 4800
34	V.34	33600, 31200, 28800, 26400, 24000, 21600, 19200,16800, 14400, 12000, 9600
56	K56Flex	32000, 34000, 36000,56000
90	V.90	29333, 30666, 32000,56000
212	Bell 212	1200
103	Bell 103	300

Examples:

AT+MS=34,0,4800,33600 V.34, No Automode, Min. speed 4800, Max speed 33600
AT+MS=,1 Automode
AT+MS=32,1,,14400 V.32 Automode, Max speed 14400 (min speed as before)

30 Smart Link Modems AT Commands Set And S-Registers

Factory Settings: 90,1,300,56000

The requested modulation scheme will be written to S32

The requested min rate will be written to S33

The requested max rate will be written to S34

The actual rate may be read from S35

The actual modulation scheme may be read from S37

(The codes as specified in the Xn command)

Other derivatives of the +MS command:

AT+MS? report current MS settings (e.g.
34,1,9600,33600)

AT+MS=? list the supported values +MS:(22,122.....),
(0,1), (300-33600), (300-33600)

Result codes:

OK Syntax OK

Error Otherwise

Related S-Reg: S31-S37

AT+F Commands - Fax Support

+FCLASS=<value> Sets Data/Fax Class1/Voice (0,1,8) mode.
+FCLASS=<value>
e> [**<value>** - 0,1,8 (Data/Fax Class1/Voice)]

Result codes:
OK Syntax OK
Error Otherwise
+FCLASS? Returns the current setting
Related S-Regs: S32, S150

+FAE Data/Fax Auto Answer
+FAE=<value> [**<value>** - 0,1 (Data/Fax Class1)]
+FAE? Returns the current setting
Related S-Regs: S151

+FTS=<value> Stops transmission and waits.
Terminates transmission and waits for **<value>*10ms** interval before responding with OK. ERROR is issued if the modem is on-hook.
+FTS? Returns the current setting

+FRS=<value> Receives Silence.
Report back to DTE with OK after **<value>*10ms** silence interval has been detected. The command is aborted if any character is received from the DTE (The response will still be OK). ERROR is issued if modem is on-hook.
+FRS? Returns the current setting

+FTM=<value> Transmits data according to the defined modulation. ERROR is issued if modem is on-hook.

Value	Modulation
24	V.27 ter 2400 bps
48	V.27 ter 4800 bps
72	V.29 7200 bps
73	V.17 7200 bps long
74	V.27 7200 bps short
96	V.29 9600 bps
97	V.17 9600 bps long
98	V.17 9600 bps short
121	V.17 12000 bps long
122	V.17 12000 bps short
145	V.17 14400 bps long

32 Smart Link Modems AT Commands Set And S-Registers

146 V.17 14400 bps short
+FTM=? Return "24, 4, 72, 73, 74, 96, 97, 98, 121, 122, 145, 146"

+FRM=
<value> Receives data according to the defined modulation
(See Values above)
ERROR is issued if modem is on-hook.
+FRM=? Return "24, 48, 72, 73, 74, 96, 97, 98, 121, 122, 145, 146"
see +FTM

+FRH=
<value> Receives data using HDLC protocol and the defined modulation .
ERROR is issued if modem is on-hook.
<value> - 3 (V.21 channel 2 300 bps)
+FRH=? Return "3"

+FTH=
<value> Transmits data using HDLC protocol and the defined modulation .
ERROR is issued if modem is on-hook.
<value> - 3 (V.21 channel 2 300 bps)
+FTH=? Return "3"

AT* Commands – Black List Support

Note: The following command will always return OK as a result code.

*B Return Blacklisted numbers

Blacklisting is a country dependent parameter.

When no duration is defined:

When a number is unsuccessfully called x successive times, it is blocked altogether, until next system reset. Further calls will return **BLACKLISTED** code.

When duration is defined:

When a number is unsuccessfully called x successive times, it is blocked temporarily until the time-out expires.

Calls within the time-out period will return **DELAYED** code.

Format:

No.	Called	Blocked	Phone
Index	# of calls	' ' (blank)	Phone
number			
		- not blocked (number still candidate for blacklist)	
		or	
		'*' (asterisk) - blacklisted/blocked	
		or	
		'Xmin' - # of min to time-out –	
		delayed	

Example 1: No time-out defined. Full blocking occurs

No.	Called	Blocked	Phone
1	5	*	t1234
2	3		t5678

Example 2: Time-out defined. Delay scheme used.

No.	Called	Blocked	Phone
1	5	2min	t1234
2	3		t5678

AT# Commands - Voice Modem Support

Note: All the following commands will return OK as a result code (or ERROR if the parameters are faulty), unless stated otherwise.

- #BDR= Sets DTE Baud Rate
<value> <value> - DTE Baud rate (0-48) *2400
- #CID= Enables the Caller ID feature in any mode
<value> #CID=0 - Disable Caller ID
#CID=1 - Enable Caller ID (Verbose)
#CID=2 - Enable Caller ID (Numeric)
- #RG= Sets receive gain level (effects the AUDIO IN level)
<value> <value> - 0-7fff
- #TL= Sets transmit level (effects the AUDIO OUT level)
<value> <value> - 0-7fff
- #CLS= Same as +FCLASS=<value>
<value> Sets Data/Fax Class1/Voice (0,1,8) mode.
- #VBS Bits per sample (ADPCM or PCM).
#VBS=<value> [<value> - 4 (ADPCM), 8,16 (PCM)]
#VBS? Returns the current setting
#VBS=? Returns "4,8,16"
Related S-Regs: S76
- #VBT Sets Beep tone timer for generating tones and DTMF.
#VBT=<value> [<value> - 0-40 (* 1/10 ms)]
#VBT? Returns the current setting
#VBT=? Returns "0-40"
- #VIP Initializes Voice Parameters
- #VIT Sets Inactivity timer.
#VIT=<value> [0-255 (* 1/10 ms)]
#VIT? Returns the current setting
#VIT=? Returns "0-255"
Related S-Regs: S19

35 Smart Link Modems AT Commands Set And S-Registers

#VLS Voice Source selection.
#VLS=<value>
0 - Telephone Line Select (Go on hook)
2 - Speakers
3 - Microphone
4 - Telephone Line Select + Samples routed to/from
Speakers/Mic in TX/RX modes
6 - Speakerphone
#VLS? Returns the current setting
#VLS=? Returns "0,2,3,4,6"
Result codes:
OK n=0, 4, 6
VCON n=2, 3
ERROR Otherwise
(For 0, 4, 6, VCON will be issued upon line
connection)

#VRA Ringback Goes Away Timer (originate).
This value is used during call progress to detect a
voice answer.
This is the interval between ringback ending and voice
answer determined.
#VRA=<value> [0-255 (*1/10 MS)]
#VRA? Returns the current setting
#VRA=? Returns "0-255"

#VRN Ringback Never Came Timer (originate)
This value is used during call progress to detect a
voice answer.
This is the interval without detection of ringback before
voice answer is determined.
#VRN=<value> [0-255 (*1/10 MS)]
#VRN? Returns the current setting
#VRN=? Returns "0-255"

#VRX Go to Voice Receive Mode.
Result codes:
CONNECT Data may be sent
ERROR VLS=0, 4, 6 and line not connected
Note: Any input from the terminal will abort Voice
Receive Mode

36 Smart Link Modems AT Commands Set And S-Registers

- #VSD Enables/Disables silence deletion (voice receive, ADPCM) (-)
#VSD=<value> [0,1 - Disable/Enable]
#VSD? Returns the current setting
#VSD=? Returns "0,1"
- #VSP Sets Silence Period (voice receive, ADPCM)
#VSP=<value> [0-255 (*1/10 ms)]
#VSP? Returns the current setting
#VSP=? Returns "0,255"
- #VSR Sets Sample Rate (PCM, ADPCM)
#VSR=<value> [7200, 11025, 8000]
#VSR? Returns the current setting
#VSR=? Returns "7200, 11025, 8000"
Only 7200 is currently supported
- #VSS Sets Silence Sensitivity (voice receive, ADPCM) (-)
#VSS=<value> [0-3] (0-Disable, 3-allow noisy conditions)
#VSS? Returns the current setting
#VSS=? Returns "0-3"
- #VTD Sets DTMF reporting capabilities in Voice Transmit, Receive, and Voice Online Command Modes.
#VTD=<value><value><value> [0-3F]
#VTD? Returns the current setting
#VTD=? Returns "<0-3F>,<0-3F>,<0-3F>"
- Bit Settings
- | Bit | Description |
|-----|--|
| 0 | Disable/Enable DTMF detection |
| 1 | Disable/Enable V.25 1300 Hz detection |
| 2 | Disable/Enable T.30 1100 Hz detection (Fax) |
| 3 | Disable/Enable V.25/T.30 2100 Hz detection (Modem) |
| 4 | Disable/Enable Bell 2225 Hz detection |
| 5 | Disable/Enable Busy/Dial tone detection |
| 6-7 | reserved |
- #VTM Enables timing mark placement.
#VTM=<value> [0-10 (* 1/10 ms)]
#VTM? Returns the current setting
#VTM=? Returns "0-10"

37 Smart Link Modems AT Commands Set And S-Registers

- #VTS** Generates a tone signal.
#VTS= [x,y,z] | {x,z} | x, ...
- [x,y,z]**
x represents the first frequency (Hz)
y represents second frequency (Hz)
z represents the duration (in 100 ms units)
- {x,z}**
DTMF Digits with Variable Duration.
x represents the DTMF digit (0-9,A-D,*,#)
z represents the duration (in 100 ms units)
- DTMF Digits, with duration defined by #VBT. This is represented by a value x (non-bracketed) corresponding to a DTMF digit (0-9,A-D,*,#,!).
Note: '!' stands for flash.
- #VGT** Sets Playback Volume [Default 192]
#VGT=<value> [0-255 (*1/10 ms)]
#VGT? Returns the current setting
#VGT=? Returns "0-255"
- #VTX** Go to Voice Receive Mode
Result codes:
CONNECT Data may be sent
ERROR VLS=0, 4, 6 and line not connected

38 Smart Link Modems AT Commands Set And S-Registers

#SPK Sets Speakerphone parameters

#SPK=<mute>,<speaker>,<mic>

<mute> 0 Microphone Mute

* 1 Microphone On (default)

2 Room Monitor (mic on Max, Speaker off)

<speaker> 0-15 - 2-30 dB attenuation

* 5 - (Default)

16 - speaker mute

<mic> 0 - 0 dB gain

* 1 - 6 dB gain (Default)

2 - 9 dB gain

3 - 12 dB gain

Note: Speakerphone function may not be supported by some models.

AT#UD Command – Modem Diagnostics Support

#UD Returns diagnostics data

Description

#UD is an action command. It does not take parameters. It shall be the last command in the command line.

In response to this command, the modem report one or more lines of information text as defined below, and terminated by <CR><LF>.

Each information text line is formatted as follows, including one or more key=value pairs:

DIAG <token key=value [[key=value] [key=value]] ...>

Character	description
DIAG	5 characters, hex: 44, 49, 41, 47, 20
<	left angle bracket (less than sign), hex: 3C
Token	unique 32-bit hexadecimal string 2A4D3263
Space	space character, hex 20
Key	One or two digit hexadecimal number, see Table 1
=	equal sign, hex: 3D
Value	any string as defined below (Tables 1-3, etc.)
>	right angle bracket (greater than sign), hex: 3E

40 Smart Link Modems AT Commands Set And S-Registers

45 Smart Link Modems AT Commands Set And S-Registers

AT%T Commands

Note: In order to use AT%T commands, the special test driver (Testdrv) must be installed. Follow the installation instructions supplied with your copy of Testdrv.

%Tn	Test mode	Auxiliary Registers Setup
%T23	- Generate DTMF 0-9	
%T32		
%T33	Generate DTMF *	
%T34	Generate DTMF #	
%T35	- Generate DTMF A-D	
%T38		
%T39	V.25 Answer Tone (2100Hz)	
%T40	V.25 Calling Tone (1300Hz)	
%T41	Fax Calling Tone (1100Hz)	
%T42	1800Hz Guard Tone	
%T90	V.21 Channel 1 mark origin	S53=3, S143=0
%T91	V.21 Channel 1 mark answer	S53=3, S143=0
%T90	V.23 Channel mark origin	S53=2
%T91	V.23 Channel mark answer	S53=2
%T90	V.22 1200 origin	S53=5
%T91	V.22 1200 answer	S53=5
%T90	V.22bis/V.34 origin (<=19200)	S53=6, S52=0/1
%T91	V.22bis/V.34 answer (<=19200)	S53=6, S52=0/1
%T90	V.32/V.34 origin	S53=7, S52=0/1
%T91	V.32/V.34 answer	S53=7, S52=0/1
%T90	V.32bis/V.34 origin	S53=9, S52=0/1
%T91	V.32bis/V.34 answer	S53=9, S52=0/1
%T91	V.21 channel 2 mark	S53=3, S143=1
%T76	V.27 2400 signaling	
%T77	V.27 4800 signaling	
%T78	V.29 7200 signaling	
%T79	V.29 9600 signaling	
%T80	V.17 12000 signaling	
%T81	V.17 12000 signaling	
%T90	V.34 org signaling (>=21600)	S53=14
%T91	V.34 ans signaling (>=21600)	S53=14
%T90	V.34bis org signal (>=31200)	S53=18

46 Smart Link Modems AT Commands Set And S-Registers

%T91 V.34bis ans signal (>=31200) S53=18

Example:

To produce V22bis answer tone type:

ats52=0

ats53=6

at%t91

Modifications of tones produced can be achieved using the following S-Registers:

S220	V22 LEVEL CONTROL
S221	Calling Tone level control (1300)
S222	Tone 1100
S223	Tone 2100
S224	Tone 1800
S225	V21 Level Control
S226	V23 Level Control
S227	V32 Level Control
S228	V34 Level Control

The values set in these registers are interpreted as follows:

Values between 1-127 increase the resulting tone level according to the following formula:

Resulting Tone Level =

$$\text{DefaultToneLevel} + (0.1 * \text{NumberEntered})\text{dB}$$

Values between 128-255: decrease the resulting tone level according to the following formula:

Resulting Tone Level =

$$\text{DefaultToneLevel} - ((256 - \text{NumberEntered})/10)\text{dB}$$

Examples:

1.To have 10dB added to the 2100 tone:

$$10 = 0.1 * \text{NumberEntered}$$

$$\Rightarrow \text{NumberEntered} = 100$$

Type: ats223=100

At%t39

2.To have 10dB lowered from the 2100 tone:

$$10 = (256 - \text{NumberEntered})/10$$

$$\Rightarrow \text{NumberEntered} = 156$$

Type: ats223 = 156

At%t39

47 Smart Link Modems AT Commands Set And S-Registers

S-Registers

The S-Registers are summarized in the following table. Registers denoted with a * may be customized using the PTT Wizard Tool.

Factory defaults

Factory defaults are stored in the Windows OS registry. They are loaded at initialization time or by AT commands (&F,Z). In addition the designated default profile (as specified by the Yn command) is subsequently loaded. The defaults shown are of the Smart Link factory settings 0 and 1.

S-Register Summary

S#	Function	Range	Units	PW	Default	AT Command
S0	Rings to Auto-Answer	0-255	rings		0	A
S1	Ring Counter	0-255	rings		0	
S2	Escape Character	0-255	ASCII		43	
S3	CR Character	0-255	ASCII		13	
S4	LF Character	0-255	ASCII		10	
S5	BS Character	0-255	ASCII		8	
S6	Wait Time for Dial Tone (Also wait before Blind Dialing)	2-255	s	*	2	D
S7	Wait Time for Carrier	1-255	s	*	60	D
S8	Pause Time for Dial (,)	0-255	s		2	D
S9	Carrier Detect Response Time	1-255	0.1s		6	
S10	Carrier Loss Disconnect Time	1-255	0.1s	*	7	
S11	DTMF Tone duration	50-255	0.001s	*	100	D

48 Smart Link Modems AT Commands Set And S-Registers

S#	Function	Range	Units	PW	Default	AT Command
S12	Reserved					
S13	Echo	0-1			1	E
S14	Quiet	0-1			0	Q
S15	Verbose	0-1			1	V
S16	Pulse/ Tone	0-1		*	1	T,P,D
S17	Reserved					
S18	Test Timer	0-255	s		0	&T
S19	System Inactivity Timer	0-255	min		0	
S20	Reserved					
S21	Break Length	0-9	100ms		9	\B
S22	Origin/Answer	0-1			0	
S23	XOFF Character (NA)	0-127	ASCII		19	
S24	Flash Timer	0-255	10 ms		20
